
ZEISS Retina Day: The Evolution of OCT

Exploring the everyday clinical use of OCT Angiography and Intra-Operative OCT

Wednesday 28th June, Conference Aston

12:30 – 13:30 Registration and hot buffet lunch

13:30 – 13:45 The Evolution of OCT

13:45 – 14:30 The use of OCT Angiography in clinical practice
(Mr Pearse Keane, Moorfields Eye Hospital)

Consultant Ophthalmologist Mr Keane will provide an insight into the experiences of Moorfields Eye Hospital in using the ZEISS CIRRUS AngioPlex for the diagnosis and management of age-related macular degeneration (AMD). He will do this by sharing a series of AMD cases which have been imaged using the ZEISS OCTA and in each case will highlight practical lessons and new insights that can be derived.

His talk will describe areas where OCTA is particularly effective, but also areas where its use can be challenging. Although still in its early stages of clinical usage, Mr Keane will demonstrate why he believes that OCTA has the potential to transform the management of AMD in the coming years.

14:30 – 15:00 The use of intraoperative OCT in surgical procedures
(Mr Soon Ch'ng, Manchester Royal Eye Hospital)

Mr Soon Ch'ng (Manchester Royal Eye Hospital Research Fellow) will share his surgical experiences of using ZEISS RESCAN intra-operative OCT technology in cases such as retinal implant treatment, retinal gene therapy and other retinal conditions.

15:00 – 15:30 Tea & Coffee break

15:30 – 16:15 3 x 15 minute interactive workshops:

- Capturing your OCT-A scans
- Mastering your OCT data with FORUM
- Real time decision making with Intraoperative OCT

16:15 – 16:30 Feedback & validation
