Friday 15th September 2023, 08:30 - 09:30

Main Lecture Theatre, The Live Room, Twickenham Stadium

An operating Neurosurgeon would like to visualise everything they need to see, ensuring they do not miss parts of a tumour or critical mass structure, with minimal tissue damage. Working ergonomically and efficiently with an engaged and educated team is the ideal and traditional microscopy has its limitations in this regard. Can this ideal be better achieved using advancing technology and surgeon-controlled robotics?

In this talk Jane Halliday will explore why utilising integrated flexible visualisation, hands free techniques and digital technology supports and improves the surgical workflow and share her learning on how to optimise new visualisation methods in microsurgery.

Speaker

Jane Halliday

Consultant Neurosurgeon, sub-specialising in skull base and pituitary, Salford Royal Hospital, Manchester.
