Precision Focus- New for CLARUS 500

- \checkmark Touch anywhere on the screen to focus.
- ✓ Enables users to fine focus in a particular area of interest

AutoFocus

- Balanced multi-point AutoFocus has a constant focus across the whole field of view
- Balanced multi-point AutoFocus is optimized for Angiographies on the CLARUS 700
- ✓ 7 Fixation points

ZA 51

Quick compare

- ✓ Useful for follow up visits
- ✓ Easily place images side by side
- ✓ Bin 1 contains images from latest visit
- ✓ Bin 2 contains images from previous visits

- In proof sheet right click the image and select 'quick compare'
- ✓ In review select

Fluorescein Angiography-For CLARUS 700

✓ The FA stack will remain at the top on the right hand side of the screen even if multiple different type of images are acquired

Fluorescein Angiography- For CLARUS 700

- ✓ The FFA images are only visible after the AutoBright process is complete
- ✓ Ending the FFA timer starts the AutoBright processing
- ✓ A loading bar will appear on the bottom of the analysis screen as the process completes

Fluorescein Angiography- For CLARUS 700

Sorting

- ✓ Angiography images can now be viewed in order of capture
- ✓ FFA images can still be sorted by time, laterality and modality

Expanding the stack

- ✓ No need to right click to expand angiography sequence
- Click instead on the button on the bottom right corner of the sequence thumbnail
